

Directory of Assistant Applications and Plugins.

Posted by donkpow - 29 Apr 2016 15:04

This thread is intended to act as an index and quick reference for 'assistant applications' and plugins used in Lightworks.

The listings should include:

- the name of the 'asst app' or plugin
- a brief description of its intended use
- the operating system(s) in which it operates
- the link to a forum thread that has significant information on the topic

If you know one that should be included in the list, message me and I'll try and run it down for you.

Assistant Applications

VirtualDub

Allows the use of VirtualDub and its features as an assistant application.

Windows only.

www.lwks.com/index.php?option=com_kunena&func=view&catid=7&id=18664&Itemid=81

AVFlow

This assistant application uses Avisynth and plugins along with a few other utilities to generate motion interpolated frame rate speed changes or ramping.

Windows only.

www.lwks.com/index.php?option=com_kunena&func=view&catid=7&id=92601&Itemid=81

SlowMoVideo

This assistant application uses Granjow's SlowMoVideo to provide the ability to "smoothly slow down and speed up your footage, optionally with motion blur."

It is proven to work on Windows.

*This assistant application may not work consistently for all users. It is listed here as a historical reference and for anyone who has an interest.

Blender

Allows the use of features of Blender as an assistant application.

Currently OSX specific. Untested on other platforms.

www.lwks.com/index.php?option=com_kunena&func=view&catid=13&id=109485&Itemid=81

*Updated May 01, 2016 for PC. Additional information for Mac and Linux users.

www.lwks.com/index.php?option=com_kunena&func=view&catid=7&id=113795&Itemid=81

Linux Script App

Permits the use of a variety of scripts to be used within the assistant application in a Linux environment.

Developed and tested on Ubuntu 14.04

www.lwks.com/index.php?option=com_kunena&func=view&catid=217&id=100707&Itemid=81

*Updated June 03, 2016 with additional scripts and script selector. External link provided for updates and installation instructions.

Good start, donkpow. The ones that would be good to see are anything for the Linux platform. There doesn't seem to be much at the moment, but maybe this thread will motivate someone to get busy.

„When you delete an Assistant Application, associated 'effect templates' are now also deleted.“ (10.0.2 alpha)

is this still true?

It's a long way from 10.0.2 alpha to the current stable release. Many things have changed since that

time.

UPDATE: I just changed the links above. Seems, after some server upgrade from my provider, they changed linking about the WEB server and they stopped working. Now they're fine ^o

Hello, I have made this procedure to install some Assistant Applications on Linux.

I also made a web page with all the instructions to install them properly.

Hoping to not break any law of the forum, the page is here: variavision.com/variavision/lightworks-linux-scripts/index.php

ALTERNATIVE LINK: variavision.crabdance.com/lightworks-linux-scripts/

Any trouble, contact me!
