**Moderated:** A new user posted prior to this with a hidden link to a dodgy website that allowed ripping of commercial media. That post has been removed and that user has been blocked. Your answer has been left here because it is useful to genuine users seeking help. Thank you - jwrl.

Hello,

To open the export panel for the current sequence (the one shown in the timeline), either press F2-key or, right-click on the timeline or the sequence viewer (the right viewer in Edit mode) and select "Export";

Welcome to the forum.

Right click on the timeline, you will find export in the sequence command.

You'll find more on P216 & 217 in the V14.5 User Guide found in downloads > documentation

The quick start video tutorial also covers it.
