

Save titles as template

Posted by Deadly Sting - 23 Jun 2017 08:38

How can I save title effects as template in Lightworks v.14.0? I can't find it in this version.

Welcome to the forum.

Using the V14 fixed layout, in VFX right click on the effect settings, the effect menu opens > save as template.

Jack_Brody posted a question related to this here, but since the technique used for version 14 and earlier is quite different to 14.5 and higher I have split it off into its own thread. You will find it at [How do I save effects as a template?](#)

. This thread is now locked because the information in it doesn't relate to current versions of Lightworks.
