

An in-depth chat with editor Scott Hill about Lightworks

Posted by briandrys - 21 Nov 2017 03:58

I was debating where to put this, but this may be the best place. It's a good primer for anyone starting out with Lightworks and a good read for more experienced users.

Just caught up with this. Good article, thanks for the link. Scott explains things clearly from a working editor's point of view, and elaborates on some of the features in a way that makes clear why Lightworks is designed the way that is.

Should be mandatory reading by Lightworks users of any level in my opinion!

Indeed... I'm only about half way through it right now, and I've already discovered some interesting things about LightWorks and about editing in general. 😊

Amazing article... The article "editing" needs a little work though.
