

## Are all the features shown in the quick start guide video included in the free version?

Posted by SergioCBPC - 12 Mar 2018 13:46

---

Hello everyone!

I came across this video editing software while looking for a solution that would cover my basic needs, which is to be able to stitch videos together, add titles at the beginning and be able to output in mp4 format.

Looking at the quick start video shown on the homepage, it showcased pretty much everything I needed to do but was wondering if everything demonstrated on the video is available in the free version. Upgrading to the Pro version for my use case would be overkill so I just thought I'd check.

Seems like an awesome tool! 🍌

-Thank you

Welcome to the forum.

The free version can do everything in the quick start guide video, the main restriction is that you're limited to 720p max resolution when exporting. However, you can take out a one month license for those projects that need the full range of export options.

Great! thanks for the response. Do you know if it's also able to export video content directly from a Panasonic camera? I would assume it does, but even if it doesn't I guess I can just copy the files to the computer first.

Best download from the camera onto your computer, then import into Lightworks. I don't know which Panasonic camera you're using, but Lightworks can't import using Firewire.
