

Diffrent frame rates making the audio play off from the video

Posted by oudendijkbobo - 04 Jun 2018 07:58

I have an issue where I have videos with different frame rates for an interview video, when I export it on 24 fps, the audio will not fit the video. IS there a solution for this?

Thank you

Hello and welcome!

Should be, but without further information about your media and your workflow it's not possible to find out what causes the problem.

First, just to exclude some known audio issues with V14.0, please install V14.5 beta and see if it fixes the problem. You'll find it under Downloads on top of this page.
