

contour shuttle pro

Posted by Henry51 - 18 Sep 2018 22:42

Is there a short description of the key assignments for the Contour shuttle?

I search here but could not find anything.

There is this video:

I recall them being listed in a thread when the Lightworks Shuttle Pro was released. Which I've found; check out the messages around this point: www.lwks.com/index.php?option=com_kunena&func=view&catid=25&id=108219&limit=15&limitstart=30&Itemid=81#108450

Linux users should check this thread: www.lwks.com/index.php?option=com_kunena&func=view&catid=25&id=72223&Itemid=81#72223

This shows current factory settings of "Editshare Lightworks" preset of "Contour Shuttle Device Configuration" software (v.2.13.3) which correspond to "Contour Shuttle (Windows).prefs" of Lightworks.

I wasn't very happy with those and changed them which took quite a while, in particular on my German keyboard, because there the shuttle wheel didn't work properly with the defaults. However, I find, the device is nice.

For further information, support and drivers for the ShuttlePro, please follow this link:

contour-design.co.uk/support/

If you're having problems removing your personal settings, when you want to use the official Editshare Lightworks settings for the ShuttlePro this should assist you:
