Don't break routing when dragging FX over unselected connected tracks [feature]
Posted by hugly - 05 Oct 2018 05:59

_____

The unofficial V14.0 video tutorial below shows that routing is disconnected when moving effects with the mouse on FX over disabled (and connected) video tracks. This is true for most recent V14.5 release candidate as well. I can see no practical benefit for this behaviour.

I suggest keeping routing untouched when moving effects on FX over deselected video tracks, the same way as it works when trimming FX over deselected tracks.

_____

That's now fixed/changed (in the next build)
