

add small Logo with free version

Posted by contacto@buenasacciones.cl - 22 Oct 2018 10:58

Hi, i need to insert my logo, i have the free version, but i cannot find the "tools" or "add" features, i just need to resize the logo and insert it with transparency at the footer....do i have to buy the program to do this???, i've downloaded it two days ago...

thanks

Welcome to the forum.

The tools are found in the flexible layout (you have a choice of two layouts in Lightworks). In the fixed layout all the effects are found under the VFX tab, which has pretty much the functions as the effects panels found in many of the video tutorials.

I suspect you may wish to key in your logo. Use the + to add a new effect and the small gray triangle at the top right of the effects browser to see the category of effects. Image key would be a starting point.

There is no difference between the effects in the free and the Pro Versions.

i´ve uploaded a jpg version, at 300 dpi 900x700, and placed it lower left corner, then scaled it in that position.

Have a look at this old user tutorial, it's for V10, but the principles are the same once you're in the VFX tab in the fixed layout. so ignore the layout.

I´m about to export again, to see if the image quality of the logo mantains, but what i cannot seem to find is a way to add a transition effect (dissolve) for the logo to appear in the beggining, the transitions option doesn´t show as it does when editing images instead of fx tracks ¿?

Use the keyframe to set the opacity, so that works to fade in and out the logo.

This unofficial video explains keyframes.
