

Full video not importing

Posted by SS_Soumyadip - 31 Mar 2019 02:51

When i am importing a .mov file from my computer the full video is not coming. When i stretch it to the video sound is absent there.

I am using a low end p.c Is it any hardware based problem ?

Welcome to the forum.

Unfortunately, you're not providing enough information. Please follow the directions in this sticky, so that users can see the technical details of your source video.

www.lwks.com/index.php?option=com_kunena&func=view&catid=23&id=66072&Itemid=81

Also, providing the spec of your computer would help.

When i a inserting my video on the timeline a part of the video gets inserted in the timeline. Like if a insert a 40 seconds video only 10-20 seconds of the video is inserted.

My p.c specifications is Corei3 530 @2.93Ghz

2 gb ram 32bit. Ligtworks version is 14.0.0.0

Your computer is under powered, so using the internal proxy editing would be the way to go. Please see here for more: www.lwks.com/index.php?option=com_kunena&func=view&catid=23&id=192818&Itemid=81#192839

When you say importing, do you mean putting the video into the sequence timeline? That's the impression I gat from your second message.

If you've got the funds, doubling the RAM in your computer would help, assuming the proxy editing improves things initially.

Yes I was saying that putting my video into the sequence timeline... Thanks.

Why can't I elongate the sequence timeline ?
Posted by SS_Soumyadip - 31 Mar 2019 04:21

Why are the red borders showing ? I can't stretch the video sequence... 🙄

Is the segment length of the inserted video in the Timeline 40 seconds long, and 20 to 30 seconds of this segment contain only black, even with stopped playback?

Or does the segment itself only have a length of 10-20 seconds?

That means Lightworks thinks this is the end of the video. This behavior is part of version 14.5 and can be disabled.

SS_Soumyadip wrote:

Ligtworks version is 14.0.0.0

Did you switch to the current version in the last few minutes?

Is that the video that has made the problems described above?

You are in trim mode on the right side, that will work, the segment on the right will extend, but it will be black when you run out of images.

If you wish to add media on either end of a full timeline. place the playhead at the end and drag the required clip into the sequence viewer (the one on the right) and it will drop into the timeline. You can also select the clip and use "v" to insert or "b" for replace to put it into the timeline.

Both these methods are faster than dragging directly into the timeline. The timeline will expand as you add clips.

Hello,

Just to clarify, the most recent version is V14.5 and not V14.0.

Lightworks respect the position of the timeline marker and possibly existing marked sections on the source clip when inserting or replacing into timeline. This is a basic principle of operations.

Please make sure that this isn't the cause of your problem. If it isn't, could you post a Mediainfo report of your footage, please? See the link in briandrys' first post for instructions.
