

Video from Nikon D300s, audio plays at 200%

Posted by pantaraf - 31 Mar 2019 12:46

Hi,

as a test I have imported a 2:20 clip from my Nikon D300s (1280x720 24fps). I can import the clip, the preview shows at the correct speed while the audio is accelerated so that stops at 1:10.

What's wrong?

I am a total newbie, so be good to me. 😊

I forgot to mention: in VLC everything is fine of course.

I have solved it, even if I don't know if it's the right method. I have cut the audio track in two, delete the second part and stretched the first to match the whole clip length.

Welcome to the forum.

Please follow the directions in this sticky, so that users can see the technical details of your Nikon video and, hopefully, the cause of the issue can be identified.

I can't imagine that this method corrects the speed change to 200%. Does it?

I have cut the audio track in two, delete the second part and stretched the first to match the whole clip length. Could you kindly post before/after screen grabs of the LW timeline? Not sure how determined the position where you needed to 'cut' the track into two.
