

Howto restore a backup (lightworks archive)? solved

Posted by schte - 29 Apr 2019 12:02

Hi all,

I hope you can help me, my harddrive had a crash and I had to install a new operation system.

How can I restore my lightworks archive?

Fortunately I always made a Backup?

Export -> Backup -> Lightworks archive

But I can't find the option to restore it.

Thank you for your help.

Welcome to the forum.

Please check our P74 & P75 in the V14.5 User Guide found in downloads > documentation

If you're still having difficulties, please come back.

If you want to automatically create a new project with the archived contents, then:

.. my harddrive had a crash and I had to install a new operation system. New installation on a new drive?

Is there a chance that data can still be recovered from the previous drive?

Export -> Backup -> Lightworks archive This procedure does not sound like project backups. Maybe you didn't archive all objects in your projects?

Then the question is what media options did you choose to create the backup from, from which drive did you import the media, etc.?
