

[Solved] Audio FX cannot be added to favourites?

Posted by timzett - 11 Jun 2019 06:01

I'd like to add some audio effects to my FX favourites, however this doesn't seem to be possible...?

Hence I filed this under the Bugs section.

Howdy Timzett,

How is it going?

Click on the asterisks left of 'Crossfade' and 'EQ', their colour should change to yellow. Then, switch to 'Category.Favorites' and see if you can find them.

Oh man am I sloppy sometimes...

Thanks it worked the way you described it.

It's going well so far, and I hope the same for you.

As you noticed I didn't find the time for video/filming stuff recently, apart from the fact I made a documentary about chess.

Currently I am finishing different old material for archival purposes and hence, coming up with issues again and every now and then 🙄

Good to hear that it works.

I played a lot of chess, back in times, as an amateur, but currently I have nobody to play with, except of my computer, and I don't enjoy playing with that guy.
