

Help - Shape fill retain part of the image

Posted by ornato67 - 14 Jun 2019 06:57

Hi everyone. I have been spending hours trying to fix a problem.

I want to right info panel solid to be on the left side.

When I move the position of the shape and text the shape retain the image on the right side.

How do I refresh the shape to show what is on the left side?

=====

Hello,

I suspect you're referring to some text effect from the 'Lower Thirds' presets.

Which exactly is it?
