

## Combine multiple audio clips into one

Posted by dylan999 - 20 Jun 2019 18:37

---

I recently pulled a backtrack song (a three minute simple electronic song) into Lightworks, and duplicated it multiple times back to back so it would repeat for the whole video. However, having 7 or 8 separate audio clips is a real pain when I want to shift it. Is there a way I can combine them all into one solid clip, or at least a way to group them all together so they're easier to move?

It's just a matter of opening cut points to trim. Here is one scenario.
