

Pop up screen won't go away

Posted by Bien26 - 25 Aug 2019 04:37

Hello

While working in Lightworks I double clicked on a file so there would pop up a slightly larger screen with the file. Now usually there's the normal cross, but it's not on my screen and I can't remove this pop up anymore.

Does anybody know this problem and has a solution to fix it?

I uploaded a print screen of it, the photo is the thing I can't seem to remove...

Thanks in advance:)

Welcome to the Forum.

This is a normal preview viewer for your source clips. Normally the one in the upper right corner has an "X" to remove it.

Unfortunately your screen resolution is too small.

If you can't choose a higher screen resolution:

Remove unnecessary tracks in the timeline and minimize the height of the timeline to give the top viewers more space.

In your operating system, minimize the taskbar as small as possible, and anything else that takes up permanent screen space.

When you start Lightworks, you'll find a gear icon in the upper right corner. Try "Fullscreen window" to give Lightworks even more space:

Lightworks also has a [flexible layout](#) that handles small screen sizes much better. I prefer it because it gives me more possibilities. It takes getting used to, though.

The next Lightworks version will come with a scrollable timeline in a fixed layout.

Oh wow thanks! It turns out to be as easy as that to fix it!

It works now so thanks a lot:)
