

## Some stil photos import with no time associated

Posted by donhuether - 26 Aug 2019 19:22

---

Some still images import with no time so they will not insert into the video, others come across fine. Is there a way to make this clips longer so that they can be imported? This is the only bad thing I can say about the software so far

=====

Hello,

If you have some images with trailing sequential number in the import folder, it could be that you've been trapped by the default settings which detect images with trailing numbers as video, so called image-sequences. If import of image sequences is unintended, this can lead to unexpected behaviour.

Do you have some images with trailing sequential number in the import folder?
