

Audio stopped playing

Posted by jphoenix - 31 Aug 2019 15:27

I don't know if anyone can help me, or if I'm even in the right place, but my audio on a video I'm editing disappeared.

My computer froze and restarted in the middle of editing, and when I booted it back up, the audio in the video wouldn't play anymore. I can see that it's present, but there is no sound.

Hello,

More information is needed to understand the nature of your problem. Could you post your computer details, including OS/version and Lightworks version, and a mediainfo report of the footage, please?
