

cant get it full screen

Posted by Dcarp23 - 13 Sep 2019 21:51

I can not get it to fit my screen fully, it has black background around it

Hello,

I wonder, what is "it" and how do you zoom?

Could you post your computer details, a Mediainfo report of your footage and specify the effect you use for zooming/scaling, please?

Here you'll information on how to create and post a Mediainfo report:

When i watch the video in my player that i recorded it is perfect and fills my whole screen, but once i put the video into lightworks it doesnt fill the whole screen.

i7-7700k @ 4.20gz

32gb ram

64bit

main monitor is 2560 x 1080 59hz 8bit

Would you mind posting a Mediainfo report too?

You have a 21:9 aspect ratio monitor. Lightworks free only exports 16:9 video at 720p resolution. To fill your screen, your player has to zoom into the video resulting in even less than 720p resolution being displayed. No wonder it appears blurry.
