

extension de los videos

Posted by jorgepekrrillo5 - 10 Oct 2019 17:53

What kind of extension should be the videos to be able to edit hopefully collaborate with me.

Lightworks will handle the following:

- MXF OP1a
- MXF OPAtom – P2
- MXF OPAtom - native Avid support
- Quicktime
- AVI
- .mts
- .m2ts
- .m2t
- .mpg
- .mp4
- .wmv (export only)
- .ts (import only)
- .m2v (import only)
- .asf (import only)
- .vob (import only)

However the codec used is the important factor when importing or exporting. An AVI or Quicktime file can contain media encoded with a range of codecs. If a codec that isn't supported by Lightworks is used there are tools available that will allow the media to be converted to a format that Lightworks can handle.
