

Exporting video shows 'pending'

Posted by Fruitbatty - 31 Jul 2020 10:07

Hello

I have tried to export my video sequence to youtube but it keeps showing 'pending'.

Can anyone please explain why this is? Could it be that I tried exporting it previously?

I've created a new channel on Youtube. I'm a little puzzled as to how the video knows where on Youtube to be exported to as there's no link to my channel. Does my video just sit in the ethers or big black hole? 🤔

Thank you!

Hello,

I cannot say what kind of problem you're encountering, but a straight forward way around the problem is this: Stop the running process (kill Lightworks if necessary), use the format 'Media files>H.264/MP4 (Free)' to export to your local File system and upload the exported video manually from your Youtube account.
