

## Erratic audio

Posted by Neil Cadman - 07 Apr 2021 01:02

---

The audio works sometimes and not other times. I have used the program with the audio working then closed the program and the next day it does not work. I have had the audio working with VFX and Audio then switch to Edit and it does not work. sometimes I manage to get the audio working in Edit. It also works in Edit in other projects. Any help would be appreciated.

Just now I have turned the audio tracks off and on and they then work.

Hello,

I encountered lost sound fixable by toggling disable/enable tracks or restarting Lightworks with different versions of Lightworks multiple times, even on simple timelines, but cannot say what it was caused by. Currently, with Lightworks 2021.2, I have the impression that the problem is gone. If you run an earlier version, give the most recent beta release a try and see what happens.
