

## LW keyboard print out

Posted by briandrys - 13 Jun 2012 07:48

---

I know it's in the user manual, but would be possible to have a separate full page pdf of the Lightworks keyboard layout?

This would allow people to easily print it out at a useful size as a reference to use with a standard computer keyboard.

Very good idee!

It would also be nice when there is a PDF or other printable format of the all featur's and tech. spec and roadmap on this site.

You can export your keyboard layout to HTML and than print it. It could have been formatted better along with shortcut descriptions though.

preferences -> change/view key assignments -> click cog -> create HTML report

oh 😊

would like to be able to buy stickers alone 😊

that HTML shortcut report is useless, only exports few items and not the whole thing

Attached is a Black and White and Color dump of the keyboard layout from the Documentation. It's not the greatest quality, due to being embed, but it might be fine for what people are looking for. At least until one of the developers puts out a better one 😊  
Enjoy!

Many thanks for doing that, unfortunately, it needs to be larger and higher resolution to make full use of the A4 page.

---

Please note... The diagram in the manual is not an English keyboard and has a few keys in a different place!

Thanks Greg, that pdf printed out nicely.

Yes, just checking, there are differently located keys, the &quot;/?&quot; and &quot;-\_&quot; are swapped for example. However, for learning the Lightworks keys that won't matter. ☺

FYI I extracted that page of the manual with GIMP at 600 ppi, added a little unsharp mask, cropped, and exported as PDF and PNG. The newest version (2) no longer saves as anything but .xcl, all other formats are now a part of the export function. ☺

That looks like a handy bit of software.

Just noticed the smiley in my post... That would be Gimp version 2.8 which is FREE!

@Greg\_E: The other day when I worked on this, I tried importing the PDF into Photoshop but got blocked by a password protection error ☺

Gimp must not care about something as trivial as a metadata password 🙄

Photoshop is told by the password that it shouldn't open it and it obeys, there is really nothing more to it than that. The password doesn't really change the access to the document.

Hi res here (11,7 mp): [drive.google.com/file/d/0BzFaG3H6VBHINkjhZWk3OW5naVU/view?usp=sharing](https://drive.google.com/file/d/0BzFaG3H6VBHINkjhZWk3OW5naVU/view?usp=sharing)  
I hope this isn't against any Lightworks law. If so I delete it.
