

Electric Sampler v2

Posted by figmo124 - 11 Mar 2013 06:28

You guys have helped me learn so much! Thank you.

ELECTRIC SAMPLER 1:47

My new marketing tool for local (Phoenix AZ) promotion. Five clips of live performances edited on Lightworks. Video quality is soft, from a very inexpensive camera, but I hope it will showcase what I can do with harmonica and PowerSlide guitar.

TECHNICAL

I noticed my slow zooming titles are stepping a little bit. What would make them smoother?

I noticed my slow zooming titles are stepping a little bit.

Are you using the DVE effect for changing scale? It seems to be smoother.

I like the material of the video. The transition between the titles seems too abrupt to me. Have you considered a fade, cross fade, or some space between them? It could just be my taste.

Hi donkpow

Yes I zoomed the titles with DVE.

Yes, I considered A/V cross fades. Maybe that WOULD be better.

Thanks!

Yeah, I don't know why it's jumpy. Mine is always jumpy, too. I've been thinking I'll get around to making image sequences for the rolling titles outside of Lightworks.

On the other thing, it's whatever you like. As a beginner, I have to watch myself that I don't get hung up on the instrument and forget about the video. It's especially bad for me with the effects. ●
