

Connecting the old VIP console Mark II

Posted by Henry51 - 18 Apr 2013 06:24

Anybody has the same problem to connect the old VIP console Mark II ?

(see screenshot)

It seems it is an 'unsupported' console...???

Any solution?

Thanks

Are you still trying to use it with a laptop? Did you ever get the MKI to work?

I use a MKII and it works flawlessly. Although I have a tower with a serial port.

So you have no more problems? Great!

It would be a good idea to post your USB adapter solution for others who want to go that way.

I think moderators should stick a FAQ topic for the console as the same questions come up quite often.

The USB Adapter works!

But not the console! 😞

See screenshot I posted above!

To get the USB Adapter working just load the the driver for your OS version from

www.prolific.com.tw/US/ShowProduct.aspx?p_id=225&pcid=41
