

64 bit console driver still not available? SOLVED

Posted by grotebeer - 16 Aug 2013 12:45

I tried to find the answer on this forum. So sorry if it's there while I don't see it. (I did see the discussion and some third party solutions but we're talking about a piece of lwks hardware) Yesterday I went from 32 to 64 bit and I like to have my Mk11 USB console working as it did in 32. But there is no driver available under the download tab?

The 64-bit driver is not available directly for download. This has been discussed many times in the forum, so I'm not sure how you missed it. Anyway, the proper procedure is to request them from Lightworks. Now the Devs may see your request and email you, but you can be sure by using the [Report a Problem](#) page or the [WebTeam's](#) email.

Thank you rhinox202. Didn't mis the discussion, thought I missed the solution. Things might have changed.

Anyway, as having my 15th years light (heavy) works anniversary this year I know how to find the devs.

No problem. Please add [SOLVED] to your first post's title. Also, congrats on 15 years!

Hi grotebeer,

this is from a 22 years Lightworks user, who also had big problems with his old VIP console.

I recommand you contact Greg; Greg Gibb ;

HE IS THE GUY WHO CAN HELP!

He also has a very cheap (10 bucks) programm that I use everytime before I start Lightwarks to initialise my console. Works fine!
