

Where is the Lightworks v11.5 Advanced User's Guide

Posted by DNL - 01 Feb 2014 15:34

Where does one find and download the "Lightworks v11.5 Advanced User's Guide"; referred to on page 4 in the basic users guide, "Lightworks v11.5 User Guide"; easily found and downloaded from download page.

I can't find this advanced guide anywhere.

Maybe it isn't posted yet.

That's correct - it's not yet available, but will be soon.

I would be happy to help prepare this doc or proof read or edit. It's such a pity there is so much currently undocumented ability in the software. It makes it very hard to answer when potential users ask if it can do something, and I just don't know the answer!

It is quite a bummer that the "Advanced User Guide" hasn't been posted. I'm not sure in which universe 'soon' equates to 4 months plus. That said, attached is the User Guide from version 11. It's a bit more comprehensive than the 11.5 guide but there are quite a few things that have changed. Just be aware of that latter fact and with a little digging in Lightworks you should be able to figure it out.

I think the Advanced Guide will probably be available with the new version 12. Not much point in having a 11.5 Advanced Guide when Lightworks 12 is just around the corner.

Given the previous time scales of beta versions, I suspect a release version 12 won't be available until after IBC.

There is every point in having this Advanced Guide ... some users have made an Outright Purchase of this software and if the appropriate manuals are not made available then for sure I will ask for my money back 🙄

actually between the 11.1 user guide and the tutorials and video explaining the new functionalities, It's not that hard to learn some of the advanced functions.

Not saying that an advanced manual is not needed, there are lots of functionality I'd wish to know better, and have a good explanation, but it's quite arguable to say that for the few coming months before v12 it might not be worthwhile to make an advanced manual for 11.5. maybe they should focus on having a good strong advanced manual for v12 at the moment it comes out.

I think we all know that the Lightworks team dosen't have unlimited resources,

Hi All,

The Advanced User Guide was put on hold due to all the drastic changes that were still in limbo for version 12.

Now that all the changes for version 12 are almost complete, work on finalising the Advanced User

Guide and updating the other documentation can continue. There was very little point in updating the guide twice.

Apologies for the inconvenience.

Matt

The problem is that new users don't have the version 11.1 guide. Also, something needs to be in place for Mac users doing their tests, even if it is a version 11.5 advanced guide.
