---

### Welcome to the Version 12 Beta page.

Here you will be able to view the list of fixes/changes between Beta builds. Please pay particular attention to the "Limitations and Known problems" list, as this will change with each new build.

To submit feedback on issues you find in the Beta versions:

-

Firstly identify whether your issue is happening repeatedly or not. If you continue to experience the same issue doing the same steps, please directly submit a ticket using the Redmine ticketing system: [dev.lwks.com](http://dev.lwks.com)

-

If your issue is not repeatable or you are unsure about how the application should be working, please first discuss the issue in the relevant category on the Lightworks Beta Forum section: [www.lwks.com/macbetaforum](http://www.lwks.com/macbetaforum) [www.lwks.com/linuxbetaforum](http://www.lwks.com/linuxbetaforum) [www.lwks.com/windowsbetaforum](http://www.lwks.com/windowsbetaforum)

-

If your thread in the Forum concludes as an issue within the Beta version, please summarise the thread and enter a ticket in the Redmine ticketing system: [dev.lwks.com](http://dev.lwks.com)

You will be able to sign in using your Lightworks Username and Password, if you are already signed in to the Lightworks Website you will be automatically signed in to Redmine. Detailed instructions on submitting useful information can be found on the Wiki page. Please make sure you have searched for the issue before submitting a ticket, this should help stop duplicate tickets being submitted. The more feedback we get, the faster we can resolve issues.

**IMPORTANT:** Any users running Blackmagic hardware will need to upgrade to the latest Blackmagic drivers 10.1 and higher, otherwise the Blackmagic Device will not be recognised.

### **Cross Platform Fixes and Features Since 12.5.c Beta:**

- Fixed inability to relink to offline media
- Fixed missing "Filter type" dropdown option menu on audio EQ settings
- Fixed potential crash exporting to AAF if the edit contains clips from a multicam bin
- Fixed crash using "Find clips to fill edit" when selecting from a target bin
- Fixed missing "ICG" error messages
- Fixed potential crash exporting an embedded AAF
- Fixed crash importing an AAF with associated media in the same folder
- Fixed missing EDL "Track Mapping" dropdown option
- Report an error if WAV exports would exceed maximum size limit
- Changed Lightworks target on AAF export to be the only target that exports the full alternate clip list from the multicam bin.
  - Added 'Freeze frame' keybind (which holds the first frame of the marked region until the end of the region, or the next seg, whichever comes first. If there are no marks, it holds the current frame until the end of the segment)

### **Mac OS X Specific Fixes and Features Since 12.5.c Beta:**

- Fixed crash exporting to WebM Format on OS X 10.8
- Fixed incorrect Boris FX/Graffiti version numbers on the Effects panel
- Fixed video not appearing in Boris FX/Graffiti if the effect is applied to a Subclip

### **Windows Specific Fixes and Features Since 12.5.c Beta**

- Fixed incorrect Boris FX/Graffiti version numbers on the Effects panel
- Fixed video not appearing in Boris FX/Graffiti if the effect is applied to a Subclip

### **Linux Specific Fixes and Features Since 12.5.c Beta:**

- N/A
