Welcome to the Version 12 Beta page.

Here you will be able to view the list of fixes/changes between Beta builds. Please pay particular attention to the "Limitations and Known problems" list, as this will change with each new build.

To submit feedback on issues you find in the Beta versions:

 -

Firstly identify whether your issue is happening repeatedly or not. If you continue to experience the same issue doing the same steps, please directly submit a ticket using the Redmine ticketing system: dev.lwks.com

 -

If your issue is not repeatable or you are unsure about how the application should be working, please first discuss the issue in the relevant category on the Lightworks Beta Forum section: www.lwks.com/macbetaforum www.lwks.com/linuxbetaforum www.lwks.com/windowsbetaforum

 -

If your thread in the Forum concludes as an issue within the Beta version, please sumarise the thread and enter a ticket in the Redmine ticketing system: dev.lwks.com

You will be able to sign in using your Lightworks Username and Password, if you are already signed in to the Lightworks Website you will be automatically signed in to Redmine. Detailed instructions on submitting useful information can be found on the Wiki page. Please make sure you have searched for the issue before submitting a ticket, this should help stop duplicate tickets being submitted. The more feedback we get, the faster we can resolve issues.

IMPORTANT: Any users running Blackmagic hardware will need to upgrade to the latest Blackmagic drivers 10.1 and higher, otherwise the Blackmagic Device will not be recognised.

Cross Platform Fixes and Features Since 12.5.d Beta:

- Fixed AAF export failing with "Error Code 1" on some edits
- Fixed incorrect video image when using Blend effect on image sequence
- Fixed potential crash clicking the "Video only" tab in the "Clips" filter of the Content Manager
- Fixed import of stereoscopic files V1L/V1R failing to output any 3D option (reimport is necessary)
- Fixed potential crash scrubbing the edit timeline with multiple V tracks and a multi tabbed effects panel open
- Prevented project unarchive rejection on frame rate grounds
- Removed MDA creation from exports with separate WAV files
- Resolved missing primary timecodes for shots in AAF imports

Mac OS X Specific Fixes and Features Since 12.5.d Beta:

- Fixed Plugin effects getting lost any time an edit was opened without having the plugin installed

Windows Specific Fixes and Features Since 12.5.d Beta

- Fixed Boris FX becoming unrecoverable if applied in the 64bit version then opened in the 32bit version of Lightworks without the plugin installed
- Fixed Plugin effects getting lost any time an edit was opened without having the plugin installed

Linux Specific Fixes and Features Since 12.5.d Beta:

- N/A
