

Welcome to the Version 14.1 Beta page.

Here you will be able to view the list of fixes/changes between Beta builds. Please pay particular attention to the "Limitations and Known problems" list, as this will change with each new build.

To submit feedback on issues you find in the Beta versions:

- Please start a Forum thread using the appropriate link below based on the operating system you are testing on. The Forum will allow you to submit issues you find or discuss how the application should be working:

- www.lwks.com/windowsbetaforum ,
- www.lwks.com/linuxbetaforum and
- www.lwks.com/macbetaforum

Please make sure you have searched for the issue before creating a new Forum thread, this should help stop duplicate threads being created. The more feedback we get, the faster we can resolve issues.

Cross Platform Fixes and Features Since 14.1.0.0 revision 101109 Beta

- Added support for decode of Cineform codecs
- Added support for exporting/transcoding to Cineform AVI/MOV (Lightworks Pro Only)
- Added ability to trim on the VFX tab
- Added warning prior to resetting Key assignments
- Added new keyboard shortcut key "Cue Marker (no prompt)"
- Added ability to copy multiple sequences in one go from a bin
- Enhanced the timeline "Appearance" option and changed the name to "Settings"
- Added new "Behaviour" tab the timeline "Settings" panel
- Added ability to Enable/Disable 'Safe' trimming (disabling safe trimming allows cuts to be extended beyond its boundaries)
 - Added ability to set timeline 'segment dragsize'(previously a config.dat entry)

- Added deletion date to the milestones recovery panel (The displayed 'deletion date' will only be correct for items deleted from now on)
 - Fixed Audio Waveforms not matching the audio during playback (waveform files .lpks will

need deleting)

- Fixed playback of clips containing an Alpha channel when the Blend Effect is applied
- Fixed Table-view bin selections not being cleared when clicking in the empty space below

the last item (Flexible Layout)

- Fixed potential crash pressing ALT+1
- Fixed potential hang importing multiple files at the same time
- Fixed incorrect image on the Letterboxing tab of the project card when set to 16bit

precision

- Fixed ALE import failing to match metadata with the actual media
- Fixed very slow analysis of MXF audio on the import panel
- Fixed hang restoring a Lightworks.archive when using a shared project space
- Fixed potential hang entering a classic shared project
- Fixed import/playback of 60fps media in a 24fps project
- Fixed issue where a new empty room is created automatically when re entering a project
- Fixed incorrect viewer timecode after changing output format (when showing 'Total

duration')

- Fixed clip labels panels not updating when changing the video output format
- Fixed EDL generation options not being saved into an export preset
- Fixed user interface not updating after adjusting audio levels with the mouse wheel during

playback

- Fixed sequence copies not being revealed correctly in the Content Manager
- Fixed timeline marker jumping to the end of a sequence after adding an audio crossfade

when zoomed in

- Fixed inability to tab between different fields on the metadata panel
- Fixed background colour selection (HSV) on BITC panel not working
- Fixed BITC not being updated when adding/modifying a Cue Marker
- Fixed BITC text colour not matching between the settings panel and what is shown in the

viewer

- Fixed Colour setting on BITC overlay not working in Flexible layout
- Fixed The BITC text on viewer not always showing the correct Cue Marker information
- Fixed Cue Marker timecodes showing as '???' for subclips
- Fixed Subclip cues do not appearing when using 'show clip cues'
- Fixed 'Show clip cues' not working for clips without video
- Fixed incorrect duration of ranged markers when showing clip cues in a sequence
- Fixed The output from 'List sources' not being useful when using image-sequences
- Fixed inactive hyperlinks for rendered clips (on the Task log)
- Fixed 'Reveal > Media files' option missing in fixed layout
- Fixed text selection not being visible when renaming Bins/Groups
- Fixed inability to copy audio levels from one clip to another
- Fixed The 'unjoin assistance' indicators not updating when the ALT key is pressed (or

released)

- Fixed labels panel not updating when switching between drop/non-drop timecode
- Fixed degraded image quality on exported files
- Fixed issue where an Alpha channel is not removed on playback
- Fixed inability to sort tile-view bins by Modification date
- Fixed the Select All button on the Local Files import panel not working

14.1 revision 101421

Written by

Wednesday, 08 November 2017 07:56 - Last Updated Wednesday, 08 November 2017 11:49

- Fixed sequence viewer window not updating after applying a letterbox
- Fixed crash when moving the Image Effect within a sequence with the video routing open
- Fixed Project name changing after opening the project card to the Details tab then switching to another tab and typing
- Fixed Fullscreen playback not switching to another clip when moving the mouse to the top of the screen to open the current bin
- Fixed User key assignments for ALT 1/2/3 disappearing on application restart
- Fixed icons on tiles dragged out of table-view bins not appearing (until the tile is dropped and the mouse moves away and back again)
- Removed 10bit 'bit depth' option on the H.264/MP4 export option
- Deselected audio tracks are now remembered when exiting the application and restarting in Fixed layout
- Undo/Redo icons are now restored to the Audio layout
- Mark All function now ignores empty segments at the current position
- Items which are not eligible for Transcode on import are now implicitly imported via 'Copy local' instead
- User export presets are now sorted alphabetically

Mac OS X Specific Fixes and Features Since 14.1.0.0 revision 101109 Beta

- Fixed potential crash exporting to H.264/MP4 using 10/16bit
- Fixed crash exporting to DPX image sequence
- Fixed unwanted system beep sound when pressing certain keys
- Fixed missing icons on the Status Window
- Fixed potential crash exporting a bin containing sequences

Windows Specific Fixes and Features Since 14.1.0.0 revision 101109 Beta

- Fixed Shared projects broadcast messages not working correctly

Linux Specific Fixes and Features Since 14.0.0.0 revision 101109 Beta

- Fixed crash exporting to DPX image sequence

Cross Platform Limitations and Known Issues

- Potential crash if attempting to export an image sequence from a sequence containing 16-bit DPX files
- There is no ability to stream/play MP3 files on the import panel
- Some MTS files will show pixelation on the start frames.
- There is currently no way of searching for Groups
- MTS files with two video streams (3D) will cause the MainConcept decoder to crash and Lightworks to close
- The screen capture function is not currently working

- CDDA ripping is no longer available
- Potential crash importing QTRef files
- Potential crash importing WMV files
- Audio monitor delay setting will not be accounted for during export
- There is no Firewire support
- AVID DNxHD 10bit encode is not possible
- Make sure any other applications are closed before attempting to install Lightworks
- Video track can turn red after removing certain FX
- .VOB files appear as "Sound" only on the import panel, but yet import with picture.

Performance will be slow

- Image quality on playback may be poor when project card set to NTSC Fields
- You will not be able to transcode 1080p 60fps files on import to AVID DNxHD (MPEG AVI works correctly)
- Blu-ray VC1 export does not generate a valid file. It imports back as Sound only
- Audio on exported AVCHD files cannot be played by Windows Media Player it is just mute
- The Record panel format must match the output format for successful recording to take place

Limitations and Known Problems on Mac 10.9 (Mavericks) and Higher

- BMP Image Sequence exports will show a slightly dark thumbnail image on the Tasks panel
- Any users running Macbook Pros MUST disable "Automatic graphics switching" under "Energy Saver" in the "System Preferences"
- Lightworks will only run on 10.9 (Mavericks) and above
- There is no H.264 MOV export
- There is no Quicktime/MPEG4 export option
- There is no FX Plugin support
- There is no .WMV import
- There is no Apple ProRes 4444 export option
- There is no MPEG AVI option on Record/Render/Transcode/Export panels
- There is no support for Matrox I/O hardware
- The shared project feature is not currently working
- Video overlay may change brightness on playback when running dual monitor setups
- MTS playback may be poor

Limitations and Known Problems (Windows 32bit)

- If the Matrox VFW codecs are installed on a Windows 8/8.1 system then you will not be able to open the export panel. Please uninstall the VFW codecs for the time being
- Image on viewers and SDI output may look very poor on old ATI graphics card when set to 10-bit precision

Limitations and Known Problems (Windows 64bit)

14.1 revision 101421

Written by

Wednesday, 08 November 2017 07:56 - Last Updated Wednesday, 08 November 2017 11:49

- There is no QuickTime Movie/MPEG4 import/export via Apple SDK
- Premiere and After Effects plugins are not supported
- Audio content analysis is disabled

Limitations and Known Problems (Linux 64bit)

Tested distros (Other distributions may work, but have not been tested):

-

Debian Distros:

- Ubuntu/Lubuntu/Xubuntu 17.10
- Mint 17

-

RPM Distros:

- Fedora 24/25

-

Fedora 25 is only support when enabling Xorg. There is no support for Wayland (default) currently

- There is no Quicktime Movie/MPEG4 export option
- There is no Mackie Audio Mixer support
- There is no .WMV import
- ATI and Nvidia cards are supported. EditShare recommends Nvidia for the best performance
- Fraps AVIs will not import
- There is no FX plugin support
- No audio imported from OMFs (that do have embedded audio)
- Audio may not be present on some Uncompressed AVIs
- Do not use linux default GFX driver. If you experience the viewer playing at a reduced size then the Linux default graphics driver is installed. Please make sure the Nvidia driver is loaded an the system is restarted

Limitations and Known Issues With Matrox Hardware I/O (Windows only)

- If your system is not fast enough or does not have enough memory, the captures using MXO2 will stop with a "dropped-frame" message
- If the drives you are recording to are not fast enough the captures using MXO2 will stop with a "dropped-frame" message

Limitations and Known Issues With Blackmagic Hardware I/O (Windows, Linux and Mac OS X)

- Input or Output only devices cannot be used. Lightworks requires both an Input and an Output to be present on the device.
- The SDI output may flash when stopping playback if set to an interlaced output
- Audio monitor level control has no effect on Blackmagic recordings
- You will not be able to view video on the Blackmagic output if Precision is set to 10bit.
Change to 8bit
- There will be no audio playback when the project card is set to 1080p59.94

Limitations and Known Issues With AJA Hardware I/O (Windows and Mac OS X)

- Audio monitor level control has no effect on AJA recording
- There is no E-E when using the KONA LHi during recording
- If your system is not fast enough or does not have enough memory, the captures using AJA devices will stop with a "dropped-frame" message
- If the drives you are recording to are not fast enough the captures using AJA devices will stop with a "dropped-frame" message
- On Kona 3G SDI 1 output must be used with Windows 32bit and SDI 2 output must be used with Windows 64bit
